

## Executive summary

**Riffr is an AI-driven automation I built that takes any song and pulls the recording apart so you can see how the music works.** Pick a song — Riffr instantly splits the recording into separate stems (just the vocals, just the drums, just the guitar), figures out the key, lists the chords, and writes a short plain-English explanation of what's musically happening. A multi-tool workflow that used to take 15 minutes across 5 separate apps, collapsed into a single click.

## Behind the build

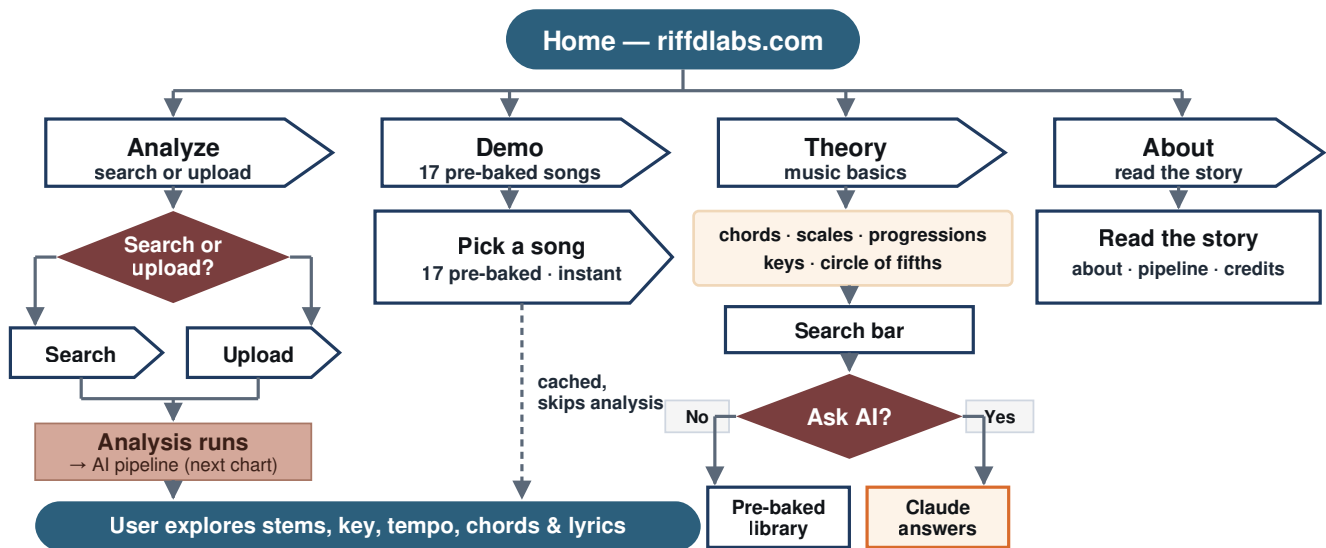

- ▶ Ship fast — high velocity
- ▶ End-to-end ownership
- ▶ AI-native workflow — Cursor + Claude Code
- ▶ AI as a tool, not a magic wand
- ▶ Agentic workflow with fallbacks
- ▶ Cost-aware at scale

### WHAT RIFFR DOES

One AI-powered web app that does the job of **Ableton** (mix & play isolated stems), **Moises** (stem separation), **Tunebat** (key & tempo), **Chordify** (chord transcription), and a **music-theory reference** — all from a single click.

## User journey

## AI pipeline (what runs on every analysis)
